

Exercise 1

```
using System;
namespace Devoir
{
    public class Exercice_1
    {
        int i,min,max,x;
        double s=0 ,Moy;
        public void A() {
            for (i=0;i<10;i++) {
                Console.WriteLine ("Tapez un entiers " +(i+1));
                x=int.Parse (Console .ReadLine ());
                s=s+x;
                Moy=s/10;
                if(i==0) min=x;
                else if (x<min) min=x ;
                else max=x; }
            Console .WriteLine ("la some="+s);
            Console .WriteLine("la moyenne="+Moy);
            Console.WriteLine ("la min="+min); Console.WriteLine ("la max="+max);
        }
        public void B()
        {
            int h,m,s,r,d;
            do{ Console .WriteLine ("donner la duree en secondes");
                d=int.Parse (Console .ReadLine ());while(d==0);
                h=d/3600;
                r=d%3600;
                m=r/60;
                s=r%60;
                Console.WriteLine (h+",heures,"+m+",minutes,"+s+",secondes");
            }
        }
    }
}
```

//exercice 2

```
using System;
namespace Devoir
{
    public class Exercice_2
    {
        public void A()
        {
            int i,n,p;
            Console.WriteLine ("donner un nombre");
            n=int.Parse(Console.ReadLine ());
            Console .WriteLine ("Table de "+n+":");
        }
    }
}
```

```
        }
        }
        or (i=1;i<=10;i++) {
            p=n*i;
            Console.WriteLine (n+"*" +i+"="+p);
        }
    }
    public void B() {
        int n,compt=0,k,somdiv,nbr;
        Console .WriteLine ("donner n premiers nombre parfaits :");
        n=int.Parse(Console .ReadLine ());
        nbr=2; while(compt !=n){
            somdiv =1; k=2;
            while(k<=nbr/2) {
                if(nbr%k==0) somdiv +=k;
                k++; }
            if(somdiv ==nbr){
                Console .WriteLine (nbr+ " est un nombre parfaits");
                compt++; }
            nbr++;
        }
    }
}

//exercice 3

using System;
namespace Devoir
{
    class Program
    {
        public static void Main(string[] args)
        {
            Exercice_1 ex1=new Exercice_1 ();
            ex1.A ();
